

AGRO PILOT

Wireless Control System for the Agricultural Sector

Fully customizable

For slurry pumps with tapping shaft, electric motor, V belt, magnetic coupling or diesel unit

Can be supplied with contactor control or frequency converter

Speed adjustment available in many variants

World record
wireless range up
to 5 km

Feedback
transmit and receive

Customizable
robust and rugged

AGRO_{PILOT}

Wireless Control System for the Agricultural Sector

The **AGROPilot** has been designed especially bearing in mind the requirements of the agricultural sector; it has a wide range of functionalities and enhancements. The wireless control system is ideally suited for switching on/off slurry pumps, water pumps, irrigation systems, sliders and other agricultural machines over very long distances. The wireless system can be extended almost in any desired way and thus optimally adapted to user-specific applications.

The **AGROPilot** combines wireless and automation systems into a single device, but the choice of standard devices is also available.

The robust and high-quality Transmitter is impact-resistant and waterproof; it is ideal for rough use in interior as well as in exterior work areas. The Transmitter's excellent ergonomics allows working with gloves and the tactile buttons enable fatigue-free operation.

The twelve backlit buttons can display feedback from the Receiver and are individually programmable, ensuring thus optimal system status display. The aluminium front panel can be customized and provided with indestructible laser inscription.

The Transmitter works with commercially available AA-type or rechargeable batteries and is hence extremely user-friendly and cost-effective. The integrated waist-belt clip on the rear side of the Transmitter allows the user to wear it comfortably on the body.

In addition, other options like integrated telephone, hour counter, integrated CoDeSys PLC, touch-screen in the Receiver and much more can be combined with the **AGROPilot**.
